

Flexitallic®

Ring Type Joint Gaskets

TECHNICAL SUPPORT AND CUSTOMER SERVICE

The company's command of its technology provides a sound basis for technical and commercial customer support. Qualified engineers are always available for technical audits, advice on specifications or troubleshooting, while every sales office has a full team of staff to deal with technical or sales enquires by telephone, fax, or e-mail.

The "customer ethic" is central to Flexitallic's philosophy and this is a part of the global strategy which is apparent in every Flexitallic business throughout the world.

PRODUCT SELECTION

Increasing environmental and economic pressures require that the most suitable product be used in every application. This brochure is intended to aid the process of product selection.

If you require more detailed information to ensure compatibility, please consult Flexitallic's Technical Department who will be pleased to assist.

COMPANY STATEMENT

The Products

Flexitallic designs and manufactures all its products under a quality system which is accredited to BS EN ISO 9001. The operating mission is to produce an unrivalled level of excellence in product specification, performance and availability.

The Environment

In the design and manufacture of its products Flexitallic gives full consideration to environmental concerns. By supplying cost effective and proven sealing products to industry the company contributes not only to greater productivity and reduced downtime, but also to the control and prevention of fugitive emissions.

All products are designed and manufactured under stringent quality controls

QUALITY ASSURED MANUFACTURING

All Flexitallic Ring Type Joints are manufactured from fully traceable materials and are supplied to NACE specifications upon request. Each Ring Type Joint is identified by low stress stamping with style, ring number, API license number, material reference, Product Specification Level (PSL), a unique Flexitallic material identification number, and month and year of manufacture. Such full and comprehensive traceability, from material source with mill certification to final supply, is an essential ingredient in the company's strict quality assurance procedures and exceeds those demanded by the highest API 6A PSL 4.

MATERIALS

The gasket material should be selected to suit the service conditions. It is always recommended that the gasket material be softer than the mating flanges. The more popular Ring Type Joint materials, with the recommended maximum hardness and identification as specified in API 6A, are shown in the table below.

For more highly specialized applications, Ring Type Joints can be machined from DUPLEX steels and other exotic materials such as Monel®, Inconel®, Incoloy®, and Hastelloy®. The Technical Department is available to advise on other materials.

Low Stress stamping for identification and traceability

PROTECTIVE COATING

In accordance with API Specifications, soft iron and low carbon steel Ring Type Joints are protected with electroplated zinc to a maximum thickness of 8µm. Alternative material coatings can be supplied on request.

STYLE R

The Ring Type Joint was initially developed for high pressure/temperature applications found in the petroleum industry and is primarily used in the oil field on drilling and completion equipment. However, today this product range can also be found on valves and pipework assemblies, along with some high integrity pressure vessel joints.

Style R

Standard Style R Ring Type Joints are manufactured in accordance with both API 6A and ASME B16.20 size/ratings. Available in both oval and octagonal configurations, both types are interchangeable on the modern octagonal type grooved flanges.

As with all solid metal Ring Type Joints including Style R, it is recommended to replace the ring when flange connection is broken.

DIMENSIONAL DATA – STYLE R

TOLERANCES: (INCHES)

A (width of ring)	±0.008
B, H (height of ring)	±0.020
P (average pitch diameter of ring)	±0.007
23 (angle)	±1/2

Flexitallic Style R Ring Type Joints can be manufactured in accordance with all relevant standards to suit the following flange designations:

- API 6A
- ASME/ANSI B16.5
- MSS SP44 (ASME B16.47 SERIES A)
- BS 1560

STYLE RX

The Style RX is an adaptation of the standard Style R which energizes on assembly. The RX is designed to fit the same groove design as a standard Style R, making the joints interchangeable.

Consideration should be given to the difference in finished make-up distance.

The modified design uses an energizing on assembly effect which improves the efficiency of the seal.

Designs are also available for Subsea applications.

Style RX

DIMENSIONAL DATA – STYLE RX

TOLERANCES: (INCHES)

A* (width of ring)	+0.008,-0.000
H* (height of ring)	+0.008,-0.000
OD (od of ring)	+0.020,-0.000
23 (angle)	± 1/2

*A plus tolerance of 0.008 inches for width 'A' and height 'H' is permitted, provided the variation in width or height does not exceed 0.004 inches throughout its entire circumference.

NOTE 1:

The pressure passage hole illustrated in the Ring Type Joint cross section ensures equalization of pressure which may be trapped in the grooves it is in rings RX82 through RX91 only Center line of hole shall be located at mid point of dimension "c" (width of flat) Hole diameter shall be as follows:

0 06 inches for rings RX82 through RX85;

0 09 inches for rings RX86 and RX87;

0 12 inches for rings RX88 through RX91

† Denotes API Ring Type Joint gaskets for segmented flanges for dual completions to API Standard 6A

Designs are also available for Subsea applications

STYLE BX

The Style BX energized Ring Type Joints, manufactured in accordance with API 6A, are designed for use on pressurized systems up to 20,000 psi.

When correctly fitted, the style BX gasket allows virtual face to face contact of the flange faces which means that the gasket is fully trapped on both the inner and outer diameters.

All BX gaskets incorporate a pressure balance hole to ensure equalization of pressure which may be trapped in the grooves.

Designs are also available for Subsea applications

Style BX

DIMENSIONAL DATA – STYLE BX

TOLERANCES: (INCHES)

A* (width of ring)	+0.008,-0.000
D (hole size)	± 0.02
H* (height of ring)	+0.008,-0.000
OD (od of ring)	+0.000,-0.005
23 (angle)	± 1/4

One pressure passage hole required per ring on center line *A plus tolerance of 0.008 inches for width 'A' and height 'H' is permitted, provided the variation in width or height does not exceed 0.004 inches throughout its entire circumference.

NOTE 1:

Radius of the ring shall be 8% to 12% of the ring height 'H'.

SPECIALIZED RING TYPE JOINTS

RUBBER COATED RING TYPE JOINTS

This is an oval Ring Type Joint totally enclosed in a nitrile rubber coating. The Ring Type Joint material is usually soft iron or low carbon steel.

This type of gasket has three main functions:

- It is used in pressure testing to minimize damage to flanges.
- The rubber contact points provide additional seals while protecting the flange surfaces.
- It provides increased assurance against corrosion, which can occur between conventional Ring Type Joints and the engaged surfaces of the groove.

A wide range of standard sizes are available, with special sizes available upon request.

Rubber Coated Ring Joint

Section through a Rubber Ring Joint

CUSTOM MANUFACTURED SEALS

Flexitallic supplies gaskets, with or without inserts, and other specialized machined metallic components to suit subsea and wellhead equipment.

BLIND RING TYPE JOINTS

Special Ring Type Joints can be manufactured to blank off flanges and pipework. They consist of standard Ring Type Joints with integral solid metallic centers.

Blind Ring Type Joints can be supplied in all standard materials and exotic alloys.

For further information on the specialized Ring Type Joint products, please contact Flexitallic's Technical Department.

For problematic ring type flange applications, the specialized Flexitallic "CG-RJ" Spiral Wound gasket design may also be considered.

Special BOP Type Joint

Section through Blind Ring Type Joint

SPECIALIZED RING TYPE JOINTS

For critical and non-standard applications, Flexitallic offers a range of specialized Ring Type Joints to suit the needs of the petrochemical industry.

TRANSITION RING TYPE JOINTS

These are combination rings which consist of two different sizes having the same pitch circle diameter. They are used for sealing Ring Type Joint flanges where the mating flanges have different ring groove diameters.

Transition Ring Type Joints can be manufactured from standard materials, as well as exotic alloys. Transition Ring Type Joints are available with either oval or octagonal facings and are not encompassed by the API specification.

Transition Ring

SUBSEA GASKETS

Flexitallic is able to provide safe, dimensionally and functionally interchangeable subsea wellhead, mudline and tree equipment within the scope of API.

The performance requirement of pressure integrity, thermal integrity, material choice along with no observable leakage allowable are met with these sealing desires.

To distinguish from topside Ring Type Joints the suffix “s” is used to indicate the additional pressure passage hold in the ring cross section. This is to indicate the additional requirement to prevent pressure lock when connections are made up underwater.

API SBX RTJ

API SRX RTJ

STYLE RX WITH PTFE INSERTS

STYLE RX RING TYPE JOINTS WITH PTFE INSERTS

Style RX Ring Type Joints can also be supplied with PTFE inserts, in order to reduce turbulent flow and eliminate gasket/flange erosion. The insert is specially designed with radially drilled pressure passage holes so that the self energizing performance of the RX Ring Joint is not impaired.

As can be seen right, the insert is located between the inside diameter of the Ring Type Joint and the bore of the flange. On assembly, the insert is completely trapped between the make up of the flanges, filling the annular space between the flange bore and gasket.

Section through Oval Ring with Insert

WELD RINGS

Another gasket concept, with origins from the German industrial market, is welded gaskets. As standard, two variants exist, Welded Membrane gaskets in accordance with DIN 2695 and Weld Ring gaskets.

WELDED MEMBRANE GASKETS

The Welded Membrane gasket consists of two similar rings each of 0.157 inch thickness. For chemical compatibility and in order to ensure controlled thermal conductivity and weld compatibility, the gasket material must always be the same as the flange material. Each ring is individually welded to its mating flange and upon flange assembly, a second welding operation ensures the joining of the rings on their outer diameter, thus providing a fully welded joint.

WELDED RING GASKETS

As with Membrane Welded Gaskets, Weld Ring Gaskets are utilized in pairs. As standard, each ring is 0.591 inches thick and manufactured to similar materials to that of the flange, thus ensuring full compatibility. All welding is conducted on the outside of the gasket and flange, thus ensuring ease of location, especially in restricted applications where space is of a minimum. Two styles exist, Style SR and Style SRL.

Single Seal Ring

Style SR

Style SRL

LENS RINGS

Flexitallic Lens Rings, manufactured in accordance with DIN 2696, provide the engineer with a high integrity, high pressure/temperature seal for special applications.

Lens Rings have a spherical surface and are suitable for use with conical flange faces (other styles are available on request).

As standard, the gasket material should be softer than the flange material, thus ensuring that the applied compressive load leads to the elastic/plastic deformation of the Lens Ring and not the flange sealing face.

By applying higher loads on the gasket the contact area between the Lens Ring and the flange increases. This prevents the gasket from being overstressed.

As with all metallic joints, the re-use of Lens Rings is not recommended. During assembly and use, work hardening of the material occurs. With subsequent re-use, increased bolt loads are required to achieve similar sealing performance. This can lead to damage to the flange faces.

Lens rings

Cross Section of Lens

FLEXITALLIC PRODUCT RANGE

SPIRAL WOUND GASKET

- Available in a variety of materials for metal winding strip, filler, and guide ring
- Style CG, CGI, R, and RIR
- Meets ASME B16.20 standards
- Class 150 to 2500
- NPS 1/2" to 60"

SIGMA

- Biaxially orientated PTFE sheet sealing materials
- PTFE sheet materials are available in a variety of forms and levels
- Long term stress retention benefit
- High level of chemical resistance
- Conform to FDA Regulations
- Cryogenic to 500°F (260°C)

THERMICULITE

- Will not oxidize, even at temperatures higher than 1800°F (580°C)
- Superb level of tightness even at 930°F (500°C)
- Maximum recommended pressure is 2900 psi
- Available in sheets, spiral wound and Flexpro gaskets

FLEXPRO GASKET (Kammprofile)

- Precision serrated metallic core with the additions of soft gasket materials
- Suitable from vacuum to Class 2500 and higher
- Suitable from cryogenics to 2000°F (1100°C), depending on core and facing materials

RTJ GASKETS

- Style R gaskets are manufactured in accordance with both API 6A and ASME B16.20 size/ratings
- Manufactured from fully traceable materials
- Available in both oval and octagonal configurations

SHEET MATERIALS

- Temperature ranges from ambient to 800°F (425°C)
- Excellent torque retention
- Good chemical resistance
- Wide range of elastomers for chemical compatibility
- Excellent sealability for wide range of chemicals

HEAT EXCHANGERS

- Metal jacketed gaskets
- Corrugated
- Solid metal
- Metal Reinforced Gasket
- Other engineered gaskets to seal challenging heat exchanger applications

FLUOROSEAL

- 100% PTFE inert and resistant to chemicals and corrosive environments
- Chemically resistant 1-14 pH range
- Withstands high pressures up to 3000 psi
- Wide temperature range from 400°F (240°C) to +500°F (260°C)

The content of this Dimensional and Order Guide relates to Flexitallic's products as supplied. The information contained herein is given in good faith, but no liability will be accepted in relation to same. The revision of products, pursuant to Flexitallic's policy of continuous development, as well as the acquisition of further information, may necessitate revisions to parts or all of this document. Flexitallic's Technical Sales Department will be pleased to update customers, on request. As the company's products are used for a multiplicity of purposes, and as Flexitallic has no control over the method of their application or use, Flexitallic must exclude all conditions or warranties, express or implied, as to their products and/or their fitness for any particular purpose. Any technical cooperation between the Company and its customers is given for the customer's assistance only, and without liability on the part of Flexitallic.

Flexitallic L.P. guarantees that any product of its manufacture, which, upon examination by a Flexitallic representative, is found to be defective in either workmanship or material whereby it is suitable under proper usage and service for the purpose for which it was designed, will be replaced or repaired free of charge including transportation charges but not cost of installation or, at our option, the purchase price will be refunded. The products are not guaranteed as to performance under any specific service nor for any specific period of time. The sale of our products under any other warranty or guarantee express or implied is not authorized by the company.

WARNING:

Properties/applications shown throughout this brochure are typical. Your specific application should not be undertaken without independent study and evaluation for suitability. For specific application recommendations consult Flexitallic. Failure to select the proper sealing products could result in property damage and/or serious personal injury.

Performance data published in this brochure has been developed from field testing, customer field reports and/or in-house testing.

While the utmost care has been used in compiling this brochure, we assume no responsibility for errors. Specifications subject to change without notice. This edition cancels all previous issues. Subject to change without notice.
